

Jean Richardson

Frontend Developer | UI/UX Designer (Design Systems & Interaction)

Portfolio: [JR Studio](#) | [Linkedin](#) | [GitHub](#) | jean.richardson610@gmail.com | Phoenix, AZ

Frontend Developer with a strong UI/UX foundation and experience building responsive, high-performance web applications using React, TypeScript, and modern frontend ecosystems. Skilled in designing scalable interfaces, real-time systems, and interactive user experiences with a focus on performance, usability, and production-quality architecture.

Professional Experience

Keep It Katelin Photography: [View Product](#)

April 2020 - Present

Frontend Developer (2026 – Present) | UI/UX Designer (2020 – Present) Contract

- Led end-to-end UI/UX design for a production photography platform, focusing on user flows, wireframing, prototyping, and responsive design
- Transitioned into a frontend development role, building scalable features using React, Next.js, JavaScript, and modern CSS (Flexbox, Grid, Tailwind CSS)
- Developed dynamic, categorized gallery systems with optimized image rendering and state-driven UI behavior
- Engineered a mobile-first gallery experience with swipe navigation, momentum-based gestures, and modal components to improve user engagement
- Optimized performance for image-heavy performance using lazy loading, image preloading, decoding, and asset optimization techniques
- Built reusable UI components and maintained a consistent design system across breakpoints and devices
- Collaborated with stakeholders to iterate on design and functionality, improving usability and overall user experience

Projects (personal)

Spatia – AI-Powered Architectural Visualization SaaS: [Live Demo](#) | [GitHub Link](#)

- Architected an AI-powered SaaS platform converting 2D floor plans into photorealistic 3D renders using Claude and Gemini APIs
- Designed a serverless architecture with persistent asset storage and high-performance KV-based data management
- Engineered a scalable, responsive frontend using React, TypeScript, Puter.js, and Tailwind CSS to support AI-driven rendering workflows

JR Canvas – Interactive Web Canvas: [Live Demo](#) | [GitHub Link](#)

- Built a high-performance interactive canvas supporting shapes, paths, frames, and editable text with full transform controls
- Implemented drag, resize, rotation, layering, zoom, and infinite canvas navigation with custom rendering logic
- Developed double-click text editing with live state updates and precision selection handling
- Engineered centralized state management enabling real-time manipulation, undo/redo, and performant re-renders

Zero_trace - Ephemeral Real-Time Chat Application: [Live Demo](#) | [GitHub Link](#)

- Built a full-stack real-time chat system with ephemeral rooms, anonymous users, and instant messaging.
- Implemented secure token-based access, server-side validation, and scalable file/image upload handling
- Integrated Redis and Upstash Realtime for ephemeral persistence and live message synchronization
- Designed automatic room lifecycle cleanup and optimized real-time event handling for scalability

Technical Skills

Frontend: React.js, Next.js, TypeScript, JavaScript, Puter.js

Styling: Tailwind CSS, Shadcn UI, GSAP, Framer Motion

Backend/Data: REST APIs, ElysiaJS, Strapi, Serverless Architecture, JSON

Tools: Git, GitHub, Vercel, Vite, Figma, Adobe Creative Suite

Education
